Preface

This report contains a summary presentation, in tabular form, of vital events data for calendar year 1980. Data relating to population size, births, deaths, marriages, divorces and annulments, and adoptions are included. The data presented for births and deaths refer to Alaska residents only. Marriages, divorces and annulments, and adoptions data presented refer to events taking place in Alaska, i.e., not necessarily to Alaskan residents.

In the interests of economy and user convenience, the Vital Statistics Annual Report format has been substantially condensed. The abbreviation of this document was undertaken only after a thorough survey of private and public users' data needs. Specific changes are discussed in later sections of the report.

We welcome readers of this publication to offer us their comments and suggestions. Comments or questions concerning the format, content, and technical aspects of the publication should be addressed to:

State of Alaska
Department of Health and Social Services
Office of Information Systems
Statistical Support Section
Pouch H-01G
Juneau, Alaska 99811

Telephone: (907) 465-3144

Requests for additional data, including requests for more detailed data or for data analyses, should be directed to:

State of Alaska
Department of Health and Social Services
Office of Administrative Services
Bureau of Vital Records
Pouch H-02G
Juneau, Alaska 99811

Telephone: (907) 465-3393

These offices will make every attempt to comply with requests for additional data or data analyses.

Introduction and Overview

The purpose of this report is twofold: to provide data which can be used as a basis for planning and policy decisions for health and social services agencies; and to provide the citizens of Alaska with information about the vital statistics of their State.

Source of Data

The source of the data included in this report is certificates of birth, death, marriage, and divorce or annulment, and reports of adoption which were registered with the Bureau of Vital Records, Department of Health and Social Services, State of Alaska. This report also includes birth and death events that occurred to Alaskan residents while outside of the State.

Time Period Reported

The time period reported in this document is the 1980 calendar year. In addition, the vital events which occurred in 1980 but were reported in 1981 (until March 31), are also included.

Population Data

The population data presented in this report were prepared by the State of Alaska, Department of Labor, Research and Analysis Section. These population data do not represent population estimates, but are population counts derived from the 1980 census of the population. Population counts are included in this report to indicate the denominator data used to calculate crude rates, and cause-specific rates for mortality data. Alaska's 1980 population counts, reported by census area, are located in Table 1.

Geographic Classification

The geographic categories used in this report represent a departure from categories used in previous reports in two ways. There is a change in the number and geographic boundaries of census areas, and there is a change in the type of geographic categories used in the table section of this report.

For general statistical purposes, the State of Alaska and the U.S. Census Bureau, cooperatively reorganized the total number and boundaries of the census areas that were in use from 1970 to 1979. For these nine years, 29 census divisions were used. In 1980, these divisions were reorganized into 23 census areas and 22 sub-areas (see Figure 1).

233	YUKON FLATS CSA

This report will use the 1980 classification of census areas. For specific information concerning the change in geographic boundaries of census areas, contact the Alaska Department of Labor, Research and Analysis Section.

The second change in the type of geographic classifications used in this year's report is that only one type of classification is used in the analysis tables. Historically, data tables have been presented using three regional classifications: Census Division; Native Regional Corporation (NRC); and Health Service Area (HSA). The present report will present only the census area classification. However, a table (page 10 & 11) has been provided which can be used to 'convert' the census area of interest to the comparable NRC and HSA. (Note that there is one exception to the census area classification which instead uses the HSA classification. This was necessary due to space limitations of the computer generated tables.)

Changes in Cause of Death Classification

Effective with the 1980 mortality data, the Office of Information Systems has adopted a new classification standard for cause-of-death data. It is in the form of 72 Selected Causes of Death, which is adapted from one of the special lists for mortality tabulations recommended by the World Health Organization for use with the Ninth Revision of the International Classification of Diseases (ICDA-9). The National Center of Health Statistics (NCHS) and most states already use the 72 Selected Causes of Death standard in their statistical publications.

Prior to 1980, the cause of death classification used to report Alaska mortality data, was based on a special tabulation of causes prepared specifically for Alaska data. As noted in the 1966 Alaska Vital Statistics Annual Report, Alaska's Vital Statistics, 1966:

> The International Classification of Diseases, Injuries and Causes of Death is the basis for all cause of death coding in Alaska as well as in all other states. Because the numbers are so small when one year's deaths are used, a special grouping of causes has been developed, which seems especially applicable to Alaska. . . . There are four broad groups: Preventable -- those causes which show a rapid decline in frequency when concerted medical and public health attention is given to them, and which distinguish a more primitive area from one more highly developed; Violent -- Accidents, Suicides, Homicides and Alcoholism, which to a certain extent are preventable, have a special significance to Alaskans; Chronic and Old Age -- those deaths where the age-specific rate rises very

> rapidly with advancing age; and All Other. Varying degrees of detail can be shown under each of these broad groups, depending upon the numbers involved, and the purpose of the comparison. 2

When first adopted, this special grouping of causes of death was coded according to the Seventh Revision of the ICDA (effective during the period 1958 - 1968). In the years 1966 through 1979, this special grouping continued to be used for the tabulation of Alaska mortality data, even though the tabulation itself varied substantially from that used by the National Center for Health Statistics and by other states in their statistical publications.

Although mortality data grouped in the manner adopted in 1966 may have been particularly appropriate for Alaska, the unique tabulation made comparisons of Alaska data with data of other jurisdictions or of the United States difficult unless these data were re-tabulated according to the Alaska classification scheme. The only data ever re-classified in this way were the Leading Causes of Death for the United States; thus comparisons of mortality at a more detailed level were not possible. Similarly, comparisons with other states' data were hindered by the unique Alaska mortality classification scheme.

It should be recalled that a major purpose of any statistical classification of causes of death is to permit study of the etiology of disease; thus, categories of the tabulation should be chosen so that they will facilitate the statistical study of disease phenomena. The special tabulation developed for Alaska does not necessarily facilitate statistical study of cause-of-death data. The four broad groupings of death -- Preventable, Violent, Chronic and Old Age, and All Other -- do not reflect contemporary knowledge about disease etiology and disease control. For example, a number of the disease entities included in the Chronic and Old Age category are essentially preventable conditions often occurring before the age of thirty-five years. In addition, tabulating data according to these four broad categories often results in the separation of related disease entities, e.g., alcoholism included in the Violent category.

[2]State of Alaska, Department of Health and Welfare, Branch of Statistical Services, Alaska's Vital Statistics, 1966, February 1, 1968.

For the reasons stated, the List of 72 Selected Causes of Death should provide a more satisfactory way of presenting cause-of-death data for statistical and other purposes. See Appendix I, which shows how the individual causes-of-death are categorized in the list of 72 Selected Causes of Death, and Appendix II, which lists the ICDA-9 codes included in each category of the List of 72 Selected Causes of Death. In dealing with the changes between the 1979 Vital Statistics Annual Report and the 1980 Vital Statistics Annual Report, the reader may find it instructive to compare Appendix I and Appendix II.

Comparability of Cause-of-Death Statistics

Approximately every ten years, the document known as the International Classification of Diseases (ICD) is revised. Though reflecting the current state-of-the-art in disease classification, each revision produces some break in the comparability of cause-of-death statistics.

The Ninth Revision (ICD-9), which was first applied to mortality data in 1979, produced many changes in the classification of cause of death. Among these changes are:

regrouping of diseases;

shifts of inclusion terms and titles from one category, section or chapter to another;

new titles and sections; and

modifications in coding rules.

Cause-of-death comparisons between pre-1979 and 1979 - 1980 data classified according to ICD-8 and ICD-9 respectively, require consideration of these changes. Appendix 2 displays a comparison of the ICD codes for the 8th and 9th revisions.

Definitions

The following is a glossary of technical terms used in the repo .

Place of Occurrence	The place where the event occurred, regardless of the place of residence.

Place of Residence	The usual place where the person to whom the event occurred lives or lived. For births, residence is defined by the mother's usual place of residence; for deaths, residence is defined by the residence of the decedent.
Birthweight	The weight of the fetus or infant at the time of delivery.
Cause-specific death rate	Number of deaths from a specific cause-of-death per 100,000 population.
Crude birth rate	Number of live births per 1,000 population
Crude death rate	Number of deaths per 1,000 population.
Crude marriage rate	Number of marriages per 1,000 population.
Fetal death	A product of conception (stillbirth) of longer than 20 weeks gestation that shows no signs of life after delivery.
ICD-8	Eighth Revision of the International Classification of Diseases. ICD-8 was used to classify cause-of-death data for the period 1968 - 1978.
ICD-9	Ninth Revision of the International Classification of Diseases. ICD-9 has been used since 1979 for the classification of cause-of-death data.
Live birth	A birth that shows any signs of life after delivery.

Race	Race for mother, adopted child and decedent (suicide deaths) is as stated on the certificate. Race of child (births) is determined from the race of parents.
Underlying cause-of-death	The condition giving rise to the chain of events leading to death.

Computation of Rates

Vital statistics provide better measures of health status when they are related to the characteristics of the population. Because human populations vary in size and composition, and the number of vital events that occur depends on both these factors, rates are used to make accurate comparisons.

Rates can control for population variability by reporting the number of events per unit of population (or other standard denominator). The crude rates, and cause-specific (death) rates, presented in this report control only for population size; they do not control for variability in population composition, e.g., variability in age, sex or race distributions of the population.

Formulas

$$\text{Crude birth rate} = \frac{\text{number of live births}}{\text{1980 population}} \times 1{,}000$$

$$\text{Crude death rate} = \frac{\text{number of deaths}}{\text{1980 population}} \times 1{,}000$$

$$\text{Crude marriage rate} = \frac{\text{number of marriages}}{\text{1980 population}} \times 1{,}000$$

$$\text{Crude divorce rate} = \frac{\text{number of divorces*}}{\text{1980 population}} \times 1{,}000$$

*includes annulments

$$\text{Cause-specific death rate} = \frac{\text{number of deaths from a specific cause}}{\text{1980 population}} \times 1{,}000$$

Limitations

Caution must be taken in forming conclusions on the basis of the various rates included in this report. It should be remembered when considering rates, that all statistics are subject to chance variation. For example, a small difference in the absolute number of vital events occuring in a small population may result in a large change in their rates of occurrence. In terms of Alaska's vital statistics, many of the rates shown in this report are based on a very small population, a very small number of events, or both. Readers should also keep in mind that the rates presented in this report are one-year rates. One-year rates are subject to random fluctuations and should not be used to infer patterns or trends in vital events.

** Included in residual category entitled "All Other Diseases". . .Residual Codes.

Appendix III

Vital Events Certificates and Lists of Variables

The vital statistics data presented in this report represent only a part of the information reported on vital events certificates. Other variables not reported in this document for births, deaths, marriages, divorces and annulments, and adoptions, but which can be made available upon user request, are described in this section. Tabulations and cross-tabulations of these data items can be provided if the cost to the State is not substantial, and the burden on staff and other resources is not unreasonable.

NEW CERTIFICATE

If the child was born in Alaska and a new birth certificate is to be prepared and filed, the following fees must be paid in advance by cash or money order: $3 for preparing and filing the new certificate; $3 each for a certified copy.

If the child was born in another state, a copy of this report will be made for the Bureau's files, and the original will be forwarded to the appropriate registration authority in the state of birth, for such action as is provided by the laws of that state.
